What is PSP?

PSP is a fatal, degenerative brain disease that has no known cause, treatment, or cure. PSP is often misdiagnosed as Parkinson's disease. Less often, it is mistaken for Alzheimer's disease. Symptoms typically begin in one's 60's, but can start as early as the 40's. PSP causes complete disability by progressively impairing all movement, balance, vision, speech and swallowing. People with PSP eventually become wheelchair bound or bedridden.
